

ELDOR

Company profile

deeper into details

Eldor AS, the leader in system engineering. We understand our customers and partners needs.

[deeper into details](#)

Our speciality

Eldor AS's business model is to perform everything from small and complex modifications to major upgrade projects in conjunction with instrumentation, automation, telecommunications and integrated operations. We understand the impact of changes in the field, throughout the whole chain of automation right up to the top systems, including remote operations. Our expertise covers the entire system from the field instruments to data on the desktop.

Bernt Eldor, Jørund Sæten (above) and Ove Heitmann Hansen heads an experienced staff of system engineers.

About Eldor AS

Eldor AS was started by engineers with extensive experience within system engineering of automation, telecommunication, instrumentation, and operations centres.

We operate in the oil and gas market, and are experts on the interface between engineering and production of automation and telecommunications systems together with integrated operations. Few contractors cover this specialist expertise. We can help avoid unnecessary time and cost spent, with the correct quality of deliveries.

Eldor AS provides services and engineers helping companies to understand and implement integrated operations. These systems allows multidiscipline teams to look in real time at reservoir conditions, well conditions, plant conditions and the export status to optimise the profitability of the field. This can be done at desk location anywhere in the world through use of technology.

Our experts have experience in change management when implementing integrated operations. Hence we are the ideal partners in the delivery of strategic integrated collaborative centres and control rooms.

We see the users' needs and know the various system elements in the technology, and can thus resolve problems timely and quickly respond to new needs. Our processes handle the interfaces between the different project phases and the contractors efficiently.

We take responsibility for the tasks we have taken on us, provide service and deliver work of superior quality.

Experience

Eldor AS has long experience with modification projects and the different challenges often associated with these projects. We have extensive knowledge how to establish operation centres & control room utilising collaborative working within and between onshore and offshore teams based on automation, telecommunication, real time data, voice and video systems and technology. Our experience covers the use of up-to-date information- and communication solutions, together with access to real-time data and collaboration between different disciplines and support functions. Organisational change management and establishing new work processes is also a part of our expertise.

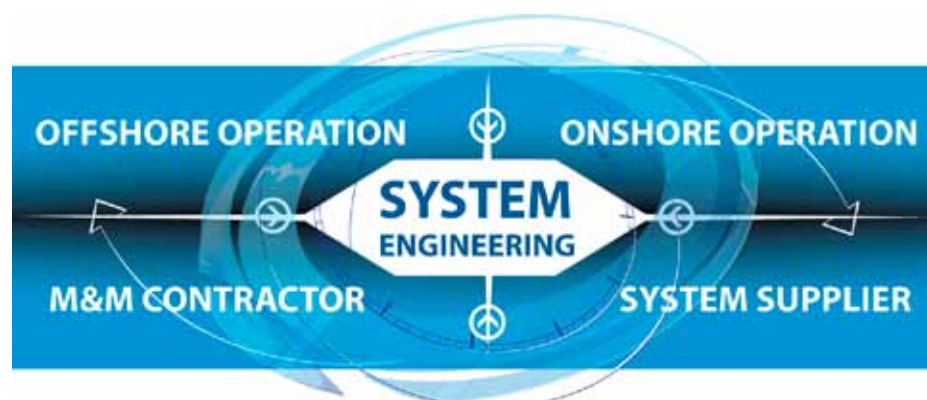

After many years of work with modifications, our engineers have good experience in project management and interface coordination. The experience ranges from small upgrades to the complex multi discipline projects. We run small modifications projects cost effectively without a large administration. Eldor AS is used to operate in an international environment.

Modification projects are challenging. Eldor solves these challenges with increased quality, safety and reduced cost.

Our deliveries

Our services cover everything from the studies, independent project deliveries, consulting services to contract management and sales.

We can also contribute as consultants within the improvement of work processes, interface handling and technology. Based on experience, Eldor AS has established a documented alarm management improvement process. This is a proven in use practical process consisting of three steps to alarm cleaning with a corresponding alarm management software.

-) **PROJECT & INTERFACE MANAGEMENT**
-) **PROJECT & MODIFICATIONS**
-) **INTEGRATED OPERATIONS**
-) **ALARM MANAGEMENT**

A successful modification or upgrade project depends on professional management of the various parties in operation (offshore and onshore) as-well as system- and M&M-contractors.

Quality management

Eldor AS's quality management system is optimized for small to medium-large project deliveries. Key words that describe the delivery process is:

- ⌋ **BUILT ON EXPERIENCE WITH SYSTEM ENGINEERING**
- ⌋ **EFFICIENT AND SUFFICIENT**
- ⌋ **INTERFACE ORIENTED**
- ⌋ **HSE FOCUSED**
